

FOR IMMEDIATE RELEASE

Virtual Management Technologies Names Director of Sales

Alpharetta, GA, August 4, 2011 – Virtual Management Technologies (VMT), a leading provider of IT infrastructure management services, has named Michael S. Bateman as Director of Sales.

In this role, Mr. Bateman will oversee all sales activities for VMT. He will be responsible for broadening VMT’s vertical markets focus, increasing the number of multi-location accounts in which the organization’s remote management capabilities are a significant advantage, and expanding the overall growth of VMT globally.

“Michael brings a unique balance of hands-on technical infrastructure knowledge with strong sales experience,” said Don Campbell, President and CEO of VMT. “He began his career as a technician in infrastructure management and successfully transitioned into a top sales and account management executive. Working closely with customers through his account management experience, he is well versed in defining managed services solutions that meet the productivity and budgetary needs of IT management.”

Beginning as an infrastructure and communications technician with the USAF and moving to engineering positions with Lockheed Martin and the FAA, Mr. Bateman moved into the financial sector as the on-line delivery Product Manager for Fiserv, Inc. Prior to joining VMT, Michael served in sales and account executive roles with Gladiator Technologies (a division of Jack Henry and Associates) and VSoft, Inc.

“We are excited about the contributions Michael will make to the accelerated growth of VMT,” stated Campbell. “Over the past several years, VMT has experienced significant growth in its managed hosting, virtualization and private cloud business segments. Michael will help continue our expansion.”

About VMT

Virtual Management Technologies (VMT) provides advanced data center management for organizations of all sizes. The company’s services help organizations manage their complex information system infrastructure including: servers, networks, VMware, Exchange email systems, security, virus management and spam, data backup and recovery, database administration and tuning, and desktop management.
