

VMT Managed Services for Accounting and Audit Firms

Busy season – a time when accounting and audit firms depend most on their computer systems. While your firm analyzes the strength of your client's financial foundation your dependency on your IT infrastructure is tremendous.

Computer down time translates to more than \$8,000 per hour for most midsize firms. Your IT infrastructure, an interlaced matrix of software and hardware components, is the core of your computer system. When configured and managed properly, your IT infrastructure can give your accounting and audit teams the technology platform they need to excel.

Virtual Management Technologies (VMT) is a managed services specialist that understands your requirements and provides a range of services to meet your IT needs. Here is an overview of the key services offered by VMT to help provide a seamless busy season and maximum uptime year round:

- **Data Center Management and Monitoring:** using advanced remote management we monitor your network environment 24/7 and proactively manage its performance, security and system updates.
- **Document and eMail Management Solutions:** through a unique relationship with Conarc®, VMT provides an advanced document management system designed for the needs of accounting firms seeking a paperless office.
- **Digital Data Backup and Recovery:** VMT replaces old technology tape storage systems with advanced digital storage technology that provides more secure and efficient methods of data storage and recovery.
- **Replications Services:** Replication Services provide a constant mirror image of your key business applications. With a latency of about four hours, your systems can be restored to full use – significantly reducing down time.
- **Hosting and Co-Location:** the VMT data center is ready to host your applications or co-locate servers to lower your risk of disaster or losing business continuity.

VMT can help your firm lower total cost of computer system maintenance and improve the stability and predictability of your IT infrastructure. We can also augment your current IT staff to allow them to tackle critical business application projects that will add revenue to your firm. Bottom line is that we are flexible to meet your business needs.
