

## VMT Managed Services for Manufacturing/Distribution Companies

Just like the products you manufacture or distribute, your information systems require a solid and robust design. Your IT infrastructure – an interlaced matrix of software and hardware components – requires the same level of quality design to provide the right operating platform.

Virtual Management Technologies (VMT) is a managed services specialist that understands the unique requirements of manufacturing and distribution companies. We know what it takes to support a single or multi-location manufacturing environment. We understand how to configure an IT infrastructure to support your strategic applications such as ERP, advanced planning or supply chain management. Here is an overview of the key services offered by VMT:

- **Data Center Management and Monitoring:** using advanced remote management, we monitor your network environment 24/7 and proactively manage its performance, security and system updates.
- **Hosted Solutions:** VMT provides hosting and colocation services for manufacturing companies offering a SAS 70 Type II data center certification and 100% guarantees on power, HVAC and connectivity to the Internet. VMT hosts ERP, SCM and CRM solutions
- **On Demand Business Intelligence:** VMT provides a unique hosted solution for the configuration and day-to-day management of a Business Intelligence dashboard/scorecard to monitor the key metrics that drive your manufacturing or distribution enterprise.
- **eMail Management:** email systems have become the backbone of the IT systems for every manufacturing and distribution company. VMT designs, deploys and manages Windows Exchange and Linux based systems.
- **Digital Data Backup and Recovery:** VMT uses advanced digital storage technology to provide a more secure and efficient method of data storage and recovery. We also provide disaster recovery planning to help preserve business continuity.
- **Database Administration:** VMT provides administration services for managing and tuning your complex database environments including Oracle, SQL/Server and DB2.
- **Security Management:** VMT provides complete security management services including network security assessment, solutions for anti-virus and intrusion detection and VPN remote security.

## A Strategic Partnership

VMT can help your firm lower total cost of computer system maintenance, improve the stability and predictability of your computer system and maximize the productivity of your IT staff – in fact, our services allow your IT staff to focus on supporting the growth needs of your organization while the certified professionals of VMT manage your network infrastructure.

Benefits of VMT Managed Services:

- ◆ Minimizes in-house IT recruiting and staffing to install, enhance and maintain highly complex software and hardware
- ◆ Minimizes high cost of building and maintaining IT infrastructure to support your business applications
- ◆ Maximizes your ability to focus on running your business while experienced professionals provide a seamless, stable operating environment
- ◆ Maximizes your ability to tap into advanced technologies that you may not otherwise be able to afford

## Hosting and Colocation Services

Many organizations today are exploring hosting and/or colocation services as a way to reduce expenses and provide a more reliable IT environment. The costs of maintaining a secure and robust data center have gone up dramatically, especially with today's business continuity demands.

The VMT data centers are ready to host your applications or colocate servers to lower your risk of disaster or losing business continuity. We provide the following guarantees: Internet access and power (100% availability); latency; packet delivery, network performance; and temperature and humidity. The bottom line: we provide a highly secure, performance-oriented environment for your applications and infrastructure.
